Factory Quality Audit Tool

Amazon Private Brand Supplier Quality Management

Audit Basic Information:

Audit Number: T250321104

Audit Requester : xcfang@amazon.com

Business Model: Direct Development

Auditor Name:

Factory FQA Risk Level: Low

Product Line: Soft Goods

Auditor Organization: TUV Oversea

Audit Type: New FQA Audit

Factory Contact Name: AHLAM OUIDADI

Oversea Auditor Name: Imad Ouchitachne

Audit Occurrence: initial_audit_onsite

Factory Contact email: ahlam@hongliu.js.cn

Audit Start Date: 05/19/2025 MM/DD/YYYY

Cost Center: (B2C)

Vendor Contact Name: Judy Wang

Audit Manday: 1.00

QM Product Line Owner: kevinhxq

Vendor Contact email: judywang@hongliu.js.cn

Sourced Products: Pillow cases set, bed skirt, bed sheet set

Vendor Name: JS Royal (Jiangyin Hongliu Bedsheet Co.,Ltd)

Factory Name (EN): LANDIS TEXTILES

Factory Name (CN):

Factory Address (EN): BD Mohammed VI, QU Industriel, Lot 2 Marjane 2, Meknes, Marrakech-Safi, Morocco

Factory Address (CN):

Facility ID: FC-M7MQ16G0SGFC

Audit ID: AD-M8BNN2R8WN

Overall 69.00%

Disqualified

Factory can apply re-audit after factory internal improvement is done.

Critical control point (CCP) failed

Factory Capability Evaluation Summary

Put a "x" in one of the rating columns for each element, to give your evaluation rating to that element, by comparing its level in the industry benchmark.

No.	Elements	Evaluation Ratings					Weight	Comments
		Good	Average	Marginal	Not Acceptable			
1	Management organization		X				4	General organization team with functional department setup, RD and purchasing was handled by the China office. During the document review it was noted that the factory has procedure/process on document control and well implemented.
2	Workforce and capacity		X				3	Around total worker number is 60 with permanent 3 management staffs and 6 quality staffs. The factory has a well planned and implemented training program for workforces and QA/QC personnel, that includes training of product knowledge, production processes, inspection & testing, and, right operations of production, testing, and measuring equipment in production and in-house lab.
3	Product / Pkg Development		X				4	The design/development was handled by China office, factory had ENG team for technical support such as process set up and products verification. Factory has right knowledge, experiences and competent engineers / technicians to develop the type of products being sourced.
4	Experiences in the category			X			8	LANDIS TEXTILES is a limited company specializing in manufacturing and making home textiles, including pillow case, flat sheet and fitted sheet. The company was established on Jul 26, 2024, started mass production since Sep, 2024. The production is 100% dedicated to the USA market. Its mother company was established in China in 1964 and main customers cover Walmart, IKEA, etc..
5	Production / Mfg Capability		X				8	LANDIS TEXTILES production process starts with reception of fabric and accessories, scan the code for warehousing, fabric scan code out of warehouse, fitted order planning, flat sheet order planning, pillowcase order planning, cutting, flat sheet machine, rolling of pillow case machine, sewing, folding, packaging (Cardboard and PVC). Semi -finished goods in storage, warehouse, semi-finished goods out of stock, packaging into carton, finished goods in storage and the final products are controlled and stored in the packing area to be sent to the client. To realize this process, the facility ensures adequate machinery, which are mainly: Steel detectors machine, cutting table machine, flat cutting machine, pillowcase cutting machine, pillowcase sewing machine, sewing machine, surgical machine, pillowcase reversing machine, flat sheet machine, fitted sheet machine and pillow case machine.
6	Material Control (incl. regulatory req.)		X				4	General supplier management, good incoming inspection implementation. But the warehouse management needs to be improved.
7	Quality Functions		X				4	Independent quality department with necessary IQC/IPQC/OQC/QA/QE. FQC implementation needs to be improved.
8	In-house Test Capability (Product)			X			5	No test equipment in factory yet, test equipments from China are still under customs clearance, hazardous material test was conducted by 3rd party.
9	In-house Test Capability (Package)		X				2	Drop test and vibration test in factory, other test performed by 3rd party.
10	Communication			X			3	Rely on China office to communicate with customers in English.

		Quality Management System Audit Checklist (质量体系审核清单)								
Weight Factor (from 1 to 5, for levels of importance)		Fully Comply (完全符合)	Majority Comply (大多数符合)	Partially Comply (部分符合)	A Few Rough Works (一点困难的工件)	Not At All (完全没有)	N/A (不相关)	Comments(意见/发现)	Score (分数)	Adjust Available Score (调整后分数)
No.	Questions(问题点)	4	3	2	1	0	X			
Section 1: Factory Facilities & Environment(第一部分:工厂设施和环境)										
1.1	Does factory look clean, organized, and secured in: production lines, storage of materials and products, rework / repair areas, inspection, and packing areas? Is the overall production process flow organized in an efficient way? (工厂整体是否干净, 整洁, 安全: 包括生产线,原料仓和成品仓, 重工返修区,检查和包装区? 总体的生产流程设置高效?)	3	X					The factory is clean, organized, and secured in all required areas.	12.00	
1.2 CCP	Does factory have the right facilities (incl. production equipment, tooling) for manufacturing of the products being sourced ? Are the maintenances / status of the facilities look good? (工厂是否有合适的设施(包括生产机器和工装用具)用于生产所采购产品? 这些设施的维护保养是否在好的状态?)	4			X			The factory has the right facilities (incl. production equipment, tooling) for manufacturing of the products. The maintenances / status of the facilities are good. LANDIS TEXTILES production process starts with reception of fabric and accessories, scan the code for warehousing, fabric scan code out of warehouse, fitted order planning, flat sheet order planning, pillowcase order planning, cutting, flat sheet machine, rolling of pillow case machine, sewing, folding, packaging (Cardboard and PVC). Test equipment is not available at factory yet, and factory did not do any test for finished product.	4.00	
1.3	Does factory have and maintain sanitation and/or pest controls in certain production workshops and / or warehouses, as necessary, to ensure products' quality and compliance? (必要时,工厂是否在特定的生产车间和仓库设立并执行卫生及虫害防治, 以确保产品质量和合规?)	3	x					Factory has and maintains sanitation and pest controls in all required areas with an approved external company.	12.00	
Section Summary Line:		Available Score: 40.00		Total Compliance Percentage: 70.00%					28.00	0
Section 2: Quality System, Documentation Control, Training(第二部分:质量体系, 文件管理, 培训)										
2.1	Does factory have a documented quality manual to define the factory's quality policy, quality objectives, organization, roles and responsibilities in quality management, and, outline the high level quality operations? Have the quality manual contents been clearly communicated and understood by factory's management staff? (工厂是否有文件化的质量手册去确定工厂的质量方针, 质量目标, 组织结构及质量管理的权责, 并且概述出质量运作要求, 并且质量手册的相关内容在内部进行充分的沟通并被管理层理解)	2		X				The factory has a detailed documented quality manual to define the factory's quality objectives and outline the high level quality operations. The factory has not obtained ISO 9001 certificate yet.	6.00	
2.2	Does the factory have a documented procedure or policy defining their approach to product safety and compliance ? (工厂是否有文件化的程序或政策去定义产品安全和合规和处理方式)	3	X					The factory has a documented procedure or policy defining their approach to product safety and compliance.	12.00	
2.3	Does the factory have a mechanism for identifying new regulations or requirements and their updates which impact their products? (工厂是否有机制来获得所生产产品的法规及其更新)	3	X					The factory has a mechanism for identifying new regulations and requirements and their updates which impact their products.	12.00	
2.4	Does factory have documented operation procedures and necessary work instructions to guide people to operate consistently and effectively achieve results as expected, and the procedures and work instructions have been communicated and understood by related employees? (工厂是否有文件化的操作指引和必要的工作指引去指导员工一致性操作并有效地达到期望的结果, 并且程序和工作指引被相关员工充分了解)	4	X					The factory has documented operation procedures and necessary work instructions to guide people to operate consistently and effectively achieve results as expected, and the procedures and work instructions have been communicated and understood by related employees.	16.00	
2.5	Does factory control documents properly, i.e. review and approval, distribution, change control, etc.? The controlled documents should include external standard documents, and technical documents like spec., drawing, BOM, standard samples, etc.. (工厂是否正确地文件控制,像文件审核,批准,分发,变更控制等?受控文件应该包括外部标准文件; 内部规格,图纸,物料清单,标准样板等技术文件)	3	X					During the document review it was noted that the factory has procedure/process on document control and well implemented.	12.00	
2.6	Does factory clearly define quality records needs in various quality operations, and the retention time of those records? (工厂是否清晰地规定了哪些质量控制位需要质量记录以及记录的保存时间)	2	X					Factory clearly defines quality records needs in various quality operations, and the retention time of all required records.	8.00	
2.7	Does factory properly keep the quality records, that includes identification, keeping in right environment, easy retrieval of records, etc.? (工厂是否正确地保存质量记录,包括标识,保存环境以及易于取得等)	2		X				Factory properly keeps the quality records, that includes identification and keeping in right environment. Records for disposition of nonconforming incoming goods are not well kept.	6.00	

2.8 CCP	Does factory have an independent Quality Department , with QA/QC personnel authorized to inspect products and materials, and take necessary actions to assure quality? (工厂是否有独立的质量部门, 有授权的QA/QC人员检验产品和原料, 并采取必要的质量保证措施。)	5		X					Factory has an independent Quality Department, with QA/QC personnel authorized to inspect products and materials, and take necessary actions to assure quality. FQC implementation needs to be improved.	15.00	
2.9	Does factory have a well planned and implemented training program for workforces and QA/QC personnel , that includes training of product knowledge, production processes, inspection & testing, and, right operations of production, testing, and measuring equipment in production and in-house lab? (工厂是否很好地规划和执行全体员工工及QA/QC人员培训体系, 内容包括产品知识, 生产流程, 检查和测试, 正确的操作生产线和实验室的生产, 计量和测试等设备)	3		X					The factory has a well planned and implemented training program for workforces and QA/QC personnel, that includes training of product knowledge, production processes, inspection & testing, and, right operations of production, testing, and measuring equipment in production and in-house lab. FQC implementation needs to be improved.	9.00	
2.10	Do factory's on-job production and QA/QC personnel have adequate knowledge of quality requirements for the product categories being sourced, relevant materials, and the production processes? (工厂员工和QA/QC人员对相关产品, 原料的质量要求以及生产流程是否有足够的知识)	4	X						The factory's on-job production and QA/QC personnel have adequate knowledge of quality requirements for the product categories being sourced, relevant materials, and the production processes.	16.00	
Section Summary Line: Available Score: 124.00 Total Compliance Percentage: 90.32%											112.00 0
Section 3: Product Development Control (第三部分: 产品设计开发控制)											
3.1	Does factory have right knowledge, experiences and competent engineers / technicians to develop the type of products being sourced? (工厂是否有具备正确的知识, 经验和能胜任的工程师/技术员去开发客户需要的产品)	5		X					The design/development was handled by China office, factory had ENG team for technical support such as process set up and products verification. Factory has right knowledge, experiences and competent engineers / technicians to develop the type of products being sourced.	15.00	
3.2	Does factory have a process to review with customers to define product requirements , that should include certain spec., product performance, safety, durability, etc. for product development? (工厂是否有相应的流程规定在确定产品要求前和客户充分沟通, 沟通开发过程中的产品标准, 表现, 安全, 可靠性等)	4	X						Factory has a process to review with customers to define product requirements, that includes certain spec., product performance, safety, durability, etc. for product development.	16.00	
3.3	Does factory have product development plans to outline product development stages, covering development of product (construction, functions, materials etc.), prototype / sample making, review / verification arrangement for the product developed, etc.? Does factory conduct necessary reviews, verifications at various stages of product development according to the plan? (工厂是否有详细的开发计划去定义好以下开发进程, 包括产品结构/功能, 需要的物料, 样板样本制作, 产品设计的审核/确认等? 工厂是否按产品开发计划安排了必要的产品开发检讨, 验证?)	5		X					Factory with their HO has product development plans to outline product development stages, covering development of product (construction, functions, materials etc.), prototype / sample making, review / verification arrangement for the product developed, etc. and conducts necessary reviews, verifications at various stages of product development according to the plan.	15.00	
3.4	Does the factory perform product safety risk assessments ? (工厂是否对产品的安全风险做出评估?)	5	X						Factory performs product safety risk assessments via DFMEA.	20.00	
3.5	Does factory's product development output right / updated product spec., drawings, and/or samples, to provide data, requirements, and instructions for production, purchasing, and quality controls? (工厂设计开发阶段是否有以下输出: 正确的产品规格, 图纸, 样板, 并为生产, 采购, 质量控制提供相应的资料, 要求, 和指引)	5		X					Factory's product development output right / updated product spec., drawings, and/or samples, to provide data, requirements, and instructions for production, purchasing, and quality controls in cooperation with their HO.	15.00	
3.6	Does factory have competent engineer / technician, and a process in place to develop, review / verify package construction which is sufficient to protect the type of products? (工厂是否有能胜任的工程师/技术员, 及相关工作流程去开发, 审核/确认产品包装结构)	4		X					Factory has competent engineer / technician, and a process in place to develop, review / verify package construction which is sufficient to protect the type of products. Required test done by 3rd party lab.	12.00	
3.7	Does factory have in-house capability to develop, review / verify User Manual, Assembly Instruction, etc. for the type of products? (工厂是否有能力自己开发, 审核/确认用户手册, 装配说明书等)	3	X						Factory has in-house capability to develop, review / verify User Manual, Assembly Instruction, etc. for the type of products. Sourced products have assembly instruction.	12.00	
3.8 CCP	Does factory conduct right and complete tests (incl. submission to 3rd party test) to verify that final product complies to the customer's and regulatory requirements before release for production? (在量产前, 工厂是否进行正确的产品测试(或第三方测试)去确认产品对于客户要求和法规要求的符合性)	5		X					Factory conducts right and complete tests (incl. submission to 3rd party test) to verify that final product complies to the customer's and regulatory requirements before release for production. Factory has all required test equipment to do test internally in the China office, and test can be done at 3rd party lab if required by customer.	15.00	
3.9	Does factory hold Pre-Production Meeting to communicate product quality requirements to production teams before mass production starts? (在量产前, 工厂是否举行产前会议交接产品质量要求给生产部门)	4	X						Factory holds Pre-Production Meeting to communicate product quality requirements to production teams before mass production starts. Last PPM record was checked.	16.00	

3.10	Does factory have a process to <u>manage post-launch product changes</u> initiated by factory or customer, including change evaluation, communicating changes to customer and get approval, implement changes and recording? (工厂是否有相应的流程去管控已上市的产品或包装的工程变更, 包括评估变更, 与客户沟通并得到批准, 实施变更并做记录)	5	X							Factory has a process to manage post-launch product changes initiated by factory or customer, including change evaluation, communicating changes to customer and get approval, implement changes and recording.	20.00	
Section Summary Line: Available Score: 180.00 Total Compliance Percentage: 86.67%											156.00	0

Section 4: Purchasing Control & Materials Control (第四部分: 采购控制和原材料(外包)控制)												
4.1	Does factory have a method / process to <u>evaluate and select its suppliers</u> (incl. subcontractors) based on their abilities to meet quality and on-time delivery requirements? (工厂是否有建立评估和选择供应商(包括分包商)的流程, 基于供应商满足质量和准时交货要求的能力)	3	X							Factory has a method / process to evaluate and select its suppliers (incl. subcontractors) based on their abilities to meet quality and on-time delivery requirements. The factory selects new suppliers based on quality, time, price, flexibility and social part.	12.00	
4.2	Does factory have a mechanism to <u>measure suppliers' quality performances</u> to ensure right suppliers are being used to consistently supply right quality materials / components? (工厂是否有评估供应商质量水平的机制去保证正确的供应商稳定地提供正确的物料/零件)	3		X						Factory has a mechanism to measure suppliers' quality performances to ensure right suppliers are being used to consistently supply right quality materials / components. The factory assesses its suppliers' performance based on quality, time, price, flexibility and social part.	9.00	
4.3	Does factory have a method / process to <u>evaluate and approve the materials / components</u> before purchase? (在采购之前工厂是否有方法/流程去评估和确定原材料/零件)	5	X							The factory has a method / process and well implemented procedure in place to evaluate and approve the materials / components before purchase.	20.00	
4.4	Does factory clearly <u>communicate quality requirements</u> to its suppliers <u>when purchase</u> materials or <u>outsourcing</u> any production processes? (当采购原物料或者外购任何半成品时工厂是否清晰的与供应商沟通其质量要求)	3					X			During the document review it was noted that the factory doesn't clearly communicate quality requirement to its suppliers when purchase materials.	0.00	
4.5	Does factory clearly <u>define inspection</u> and testing requirements for <u>incoming</u> materials / components, that should include sampling plan, inspection / test items, acceptance criteria? (工厂是否清晰地定义原材料和零件的检验和测试要求, 包括抽样计划, 检验/测试内容, 收货标准等)	3		X						Factory clearly defines inspection and testing requirements for package materials / components purchased from local area. For main materials, e.g. fabric, inspection is defined to be done by China office.	9.00	
4.6 CCP	Does factory <u>conduct inspection / tests for incoming materials / components</u> according to the defined requirements, documented drawing / spec., product requirements, reference samples, and certain inspection / testing work instructions? Are IQC records kept? (工厂是否按照定义的要求进行原物料/零件的检验/测试, 定义的要求包括受控的图纸/标准, 产品要求, 客户样板, 以及检验/测试指导书等? 有保留IQC记录吗?)	5		X						Factory conducts inspection / tests for package materials / components according to the defined requirements, documented drawing / spec., product requirements, reference samples, and certain inspection / testing work instructions. Main materials from China are inspected directly by China office before sending to factory.	15.00	
4.7	Does factory clearly <u>identify inspection status</u> for incoming goods, separate the goods that passed inspection, not inspected, failed inspection, so as to prevent unintended uses? (工厂是否清晰地定义来料的检验状态, 正确区分出检验合格, 待检验, 检验不合格, 避免混用和非预期使用)	2	X							Factory clearly identifies inspection status for incoming goods, separates the goods that passed inspection, not inspected, failed inspection, so as to prevent unintended uses.	8.00	
4.8	Does factory clearly <u>define and implement</u> processes / authorities for <u>disposition of nonconforming</u> incoming goods, that could be RTV, rework & reinspect, approved concession? Are disposition records kept? (工厂是否清晰地定义并执行来料不良品处理的流程/权限, 可能是退货, 重工, 重检验, 批准豁免, 有保留不合格品处理的记录吗?)	4		X						During the document review it was noted that the factory clearly defines and implements processes / authorities for disposition of nonconforming incoming goods, that could be RTV, rework & reinspection, approved concession. But, records are not kept.	12.00	
4.9	Does factory <u>store the materials and components</u> in areas / warehouses with appropriate environment, stack and rotate stocks <u>properly</u> , like FIFO (First In First Out) to prevent materials / components from deterioration or over stock due date? (工厂的原物料/零件仓是否有合适的储存环境, 正确的储存和周转, 执行先进先出避免原物料/零件劣化或过期)	3	X							Factory stores the materials and components in areas / warehouses with appropriate environment, stack and rotate stocks properly, like FIFO (First In First Out) to prevent materials / components from deterioration or over stock due date.	12.00	
4.10	Does factory <u>identify products / materials</u> properly with models, item #, receiving dates, etc., and, separate materials for specific markets, e.g.: CARB P2 for USA, REACH for EU, <u>to prevent unintended use</u> of wrong quality materials / products? And the identifications facilitate traceability? (工厂是否用型号, 物料编号, 来料日期等正确地识别物料/产品, 包括区分不同目标市场物料, 比如区分CARB, REACH 物料, 以避免非预期使用错误的物料/产品? 标识能提供追溯性?)	4	X							Factory identifies products / materials properly with models, item #, receiving dates, etc., and separates materials for specific markets.	16.00	
4.11	Does factory <u>handle, transport</u> materials, components and WIPs appropriately to prevent products from damages, scratches, etc.? (工厂是否正确地处理, 运送相关原料, 零件和半成品而避免损坏和刮花等)	3	X							Factory handles, transports materials, components and WIPs appropriately to prevent products from damages, scratches, etc..	12.00	

Section Summary Line:				Available Score:	152.00	Total Compliance Percentage:	82.24%	125.00	0
-----------------------	--	--	--	------------------	--------	------------------------------	--------	--------	---

Section 5: Production and In-process Quality Control (General Part) (第五部分: 生产和过程质量控制)									
5.1	Does factory plan productions properly for customers' orders, by considering purchasing and production lead time, workforces, available capacity, etc., and have means to manage productions in peak seasons? Does factory maintain a good record of on-time delivery ? (工厂能否基于工厂的采购及生产周期, 人力和产能, 合理按客户订单安排生产, 并有力在高峰期管理好生产? 工厂是否保持良好的 (90%) 准时交货率?)	3				X		During the document review it was noted that there is a production plan in place for customers' orders, by considering purchasing and production lead time, workforces, available capacity, etc., and have means to manage productions in peak seasons. Factory's on-time delivery rate is not calculated.	6.00
5.2	Does factory plan its manufacturing processes for types of products with consideration of risks and necessary controls (e.g.: from PFMEA outputs), to outline process steps (incl. outsourced ones), identifying key areas of risks, define process requirements and execute quality controls, to effectively eliminate risks to quality of products in the productions? Are there validation for special processes (processes can't be verified by subsequent inspection or non-destructive testing)? (工厂是否考虑风险及控制的要求 (比如, 依据“制程失效模式分析”的输出结果) 来规划生产制程 (包括外发制程), 对识别出来的制程关键质量控制点安排和执行有效的控制, 以消除生产中导致产品质量问题的风险。特殊过程 (无法被后续工序检验, 或需要破坏性测试来检验的工序) 是否经过验证?)	5	X					Factory plans its manufacturing processes for types of products with consideration of risks and necessary controls (e.g.: from PFMEA outputs), to outline process steps, identify key areas of risks, define process requirements and execute quality controls, to effectively eliminate risks to quality of products in the productions.	20.00
5.3	Does factory arrange manufacturing processes according to the plans , with right allocation of material / component, equipment, work forces, in-process inspection / tests, etc. for the type of products? (工厂是否正确安排生产, 恰当地分配物料/零件、设备、人力、过程检验/测试等)	4	X					Factory arranges manufacturing processes according to the plans, with right allocation of material / component, equipment, work forces, in-process inspection / tests, etc. for the type of products.	16.00
5.4	Does factory prepare and provide necessary work instructions , reference samples, etc. with defined working methods, quality acceptance criteria, and/or defects classifications, at certain workstations for production or inspection use? (工厂是否准备好必要的工作指引、参考样板等, 在确定的工位有已经定义好的工作方法、质量接收标准, 以及不良分类等支持生产和检验)	3	X					Factory prepares and provides necessary work instructions, reference samples, etc. with defined working methods, quality acceptance criteria, and/or defects classifications, at certain workstations for production or inspection use.	12.00
5.5	Does factory's Production / QC inspect and sign off the first articles of WIPs and finished products at appropriate process steps to ensure that they meet the requirements with regard to specification, quality & safety? (工厂生产/QC是否在过程和成品阶段审核及签发首件来保证产品满足规格、质量及安全方面的要求?)	4					X	During the document review and on-site check it was noted that the factory's Production / QC doesn't inspect and sign off the first articles of WIPs and finished products at appropriate process steps to ensure that they meet the requirements with regard to specification, quality & safety. Related procedures or requirement for FAI is in place.	0.00
5.6	Does factory use appropriate jigs / fixtures as necessary to control consistency of positions, directions, level, gaps etc. in relevant production processes? 在相关的生产制程, 工厂是否应用适当的工装夹具控制位置、方向、水平面、缝隙的一致性	3	X					Factory uses appropriate fixtures as necessary to control consistency of positions, directions, level, gaps etc. in relevant production processes. the sewing machines was controlled.	12.00
5.7	Does factory control process parameters (like: temperature, humidity, speed, torque, pressure, drying time, etc.) in production to ensure product quality is achieved and consistent? 工厂是否控制关键制程参数 (如温度、湿度、速度、扭力、压力、时间等) 来确保质量的达成及一致	4	X					Factory controls process parameters (like: temperature, humidity, speed, pressure) in production to ensure product quality is achieved and consistent. The automatic cutting machine has an automatic system quality control.	16.00
5.8	Does factory production select right quality materials / components , and/or control recycle materials ratio (e.g.: plastic injection materials) for production use, to ensure the outcome products having right quality? 工厂是否选择正确的原料/零件, 以及控制再生料的比率 (如注塑塑胶料), 以达到产品质量	3	X					During the document review it was noted that factory production selects right quality materials / components for production use, to ensure the outcome products having right quality. No recycle materials used.	12.00
5.9	Does factory production always apply sufficient auxiliary materials (like glue, paint), and use proper production reference samples (like color panels) to control production consistency, ensure product construction integrity and finish conformity? 工厂是否经常应用足够的辅助物料 (如胶水、颜料), 并且应用适当的参考样板 (如色版) 去控制生产过程, 以达到产品结构和成品的符合性	3	X					Factory production always applies sufficient auxiliary materials (like glue, paint), and uses proper production reference samples (like color panels) to control production consistency, ensure product construction integrity and finish conformity.	12.00
5.10	Does factory plan and conduct production equipment maintenances properly, to ensure precision and good conditions of the production equipment? (工厂是否适当策划和执行生产设备保养, 以确保生产设备的精确度和好的状态)	3	X					Factory plans and conducts production equipment maintenances properly, to ensure precision and good conditions of the production equipment.	12.00
5.11	Does the factory clearly identify products / components in production, segregate and isolate non-compliant materials and products in all areas to prevent unintended use? (工厂是否在生产过程中, 清晰地标识产品和零件, 及将合规的产品/材料与非合规的产品/材料隔离开, 以防止它们的误用?)	3	X					Factory clearly identifies products / components in production, segregates and isolates non-compliant materials and products in all areas to prevent unintended use.	12.00

5.12 CCP	Does factory have method to control and prevent risks of physical, chemical and biological (such as: molds, needles, sharp tools, RoHS/non-RoHS materials) contaminations in the production processes that may damage the products and/or personnel? 工厂是否有方法控制和预防生产过程中物理、化学及生物污染等可能造成产品/人员的损坏 (比如发霉, 断针, 利器, RoHS和非RoHS物料混用)	5	X						Factory has method to control and prevent risks of physical, chemical and biological (such as: molds, needles, sharp tools, RoHS/non-RoHS materials) contaminations in the production processes that may damage the products and/or personnel.	20.00	
5.13	Does factory define, communicate, and correctly follow the package requirements (package materials, package method, labeling, packing list, etc.) in production? 生产中工厂是否定义、沟通并且正确地遵照包装要求(包装材料, 包装方法, 标签, 包装清单等)	3	X						Factory defines, communicates, and correctly follows the package requirements (package materials, package method, labeling, packing list, etc.) in production.	12.00	
5.14	Does factory clearly define in-process inspections , include inspection needs at various stages, frequency / sampling plan, inspection and testing methods, equipment to use, quality requirements and acceptance criteria, etc.? 工厂是否清晰地定义过程检验, 包括检验点, 检验频率/抽样计划, 检验和测试方法, 检验仪器, 质量要求及接收标准	4			X				During the document review it was noted that factory defines in-process inspections, including inspection needs at various stages, sampling plan, inspection and testing methods, equipment to use, quality requirements and acceptance criteria. But does not define the frequency of in-process inspections.	8.00	
5.15	Does factory conduct in-process inspections according to the defined requirements, at appropriate stations, against the defined product spec., drawing, sample, etc.? 工厂是否按照确定的要求进行过程检验, 包括检验点, 确定的产品规格, 图纸, 样板等	5		X					Factory conducts in-process inspections according to the defined requirements, at appropriate stations, against the defined product spec., drawing, sample, etc..	15.00	
5.16	Does factory record inspection results and findings, feedback / review with productions as appropriate? 工厂是否记录检验结果和发现, 并恰当地向生产部门反馈	3	x						Factory records inspection results and findings, feedback / reviews with productions as appropriate.	12.00	
5.17	Does factory clearly identify inspection status of products in production lines, segregate nonconforming products properly? 工厂是否清晰地识别产品的检验状态, 正确地区分出不合格品	2	X						Factory clearly identifies inspection status of products in production lines and segregates nonconforming products properly.	8.00	
5.18	Does factory define and implement processes / authorities for disposition of nonconforming products in productions, that could be rework & reinspect, approved concession, etc.? 工厂是否定义和执行不良品处理流程和权限, 可能包括重工, 重检, 批准豁免	4	X						Factory defines and implements processes / authorities for disposition of nonconforming products in productions, that could be rework & reinspection, approved concession.	16.00	
Section Summary Line:		Available Score:	256.00	Total Compliance Percentage:		86.33%				221.00	0

Section 6: Final Inspection & Test (第六部分: 最终成品检查及测试)											
6.1	Does factory clearly define inspection requirements for the finished products , especially for critical features like, construction, performances, safety and serviceability, etc., and, define the inspection sampling plan, acceptance criteria? (工厂是否清晰地定义成品的检验要求, 特别是结构, 表现, 耐用, 安全和适用性等, 定义检验抽样计划和接收标准)	3		X					Factory defines inspection requirements for the finished products, especially for critical features like performances, safety and serviceability, etc., and defines the inspection sampling plan, acceptance criteria.	9.00	
6.2	Does factory train its QA/QCs to clearly understand quality requirements for the final products, and understand inspection processes (i.e.: inspection and test items / needs, methods & tooling, frequencies / sampling plan, acceptance criteria, etc.)? (工厂是否培训QA/QC人员理解产品和检验的质量要求(检验和测试项目, 方法, 测试设备, 频率, 抽样计划, 接收准则等))	4		X					Factory trains its QA/QCs to clearly understand quality requirements for the final products, and understand inspection processes. FQC does not do test on finished product as test equipment is not available yet.	12.00	
6.3 CCP	Does factory conduct final inspections according to the defined process, against relevant drawings / specifications, product requirements, reference samples, and conduct adequate tests to verify products' safety, fit for use, durability, etc.? (工厂是否按照定义好的流程进行终检, 依据相关的图纸 / 规格, 特殊产品要求, 参考样板, 并进行足够的测试去验证产品的安全性, 使用功能, 耐用性等)	5			X				Factory conducts final inspections according to the defined process, against relevant drawings / specifications, product requirements, reference samples, but tests on finished products are not conducted internally at factory yet as test equipment is not available yet. Products are sent to 3rd party lab for testing. Records available.	5.00	
6.4	Does factory record final inspection results and findings, feedback / review with productions for corrective actions / improvement opportunities? (工厂是否记录终检结果和发现, 并反馈给生产部门作为纠正和改善机会)	3	x						Factory records final inspection results and findings, feedback / reviews with productions for corrective actions / improvement opportunities.	12.00	
6.5	Does factory clearly identify inspection status of final products, segregate nonconforming products properly? (工厂是否清晰地识别检验产品的状态, 隔离出不良品)	2	X						Factory clearly identifies inspection status of final products, segregates nonconforming products properly.	8.00	

6.6 CCP	Does factory define and implement a process, with necessary authorities, to <u>make dispositions for the inspection failed products</u> , dispositions could be: rework and re-inspection, accept on deviation, etc., and, communicate to customer's approval? (工厂是否有定义和执行不良品处理流程,可能包括重工,重检,接收差异等,并且得到客户的批准)	5	X						Factory defines and implements a process, with necessary authorities, to make dispositions for the inspection failed products, dispositions could be: rework and re-inspection, accept on deviation, etc., and communicates to customer's approval. Record checked of some failed products.	20.00	
6.7	Does factory have a correct shipping operation process in place to control that <u>products are NOT shipped until they have passed final inspection?</u> (工厂是否有正确的出货流程,确保产品通过终检合格后才能出货)	4	X						Factory has a correct shipping operation process in place to control that products are NOT shipped until they have passed final inspection.	16.00	
Section Summary Line: Available Score: 104.00 Total Compliance Percentage: 78.85%										82.00	0

Section 7: Control of Measuring and Testing Equipment (第七部分:计量和测试设备的控制)											
7.1	Does factory have <u>right measuring and testing equipment (with right scale and range)</u> used in inspections and tests for incoming goods, products in production processes, and final products? Does factory maintain these measuring / test equipment always in a <u>good / usable condition?</u> (工厂是否有合适的设备(合适的刻度和量程)进行原材料、制程及成品的检验和测试,并保养测量仪器、测量/测试设备以确保它们在好的可用的状态?)	4				X			During the document review it was noted that factory has no test of all equipment available. Only one calibration certificate was provided on the audit day regarding the Measuring ruler. Test equipment such as light box, colorfastness tester, crocking tester, etc. are moved from China and under customs clearance at present.	4.00	
7.2	Does factory have a <u>master list and calibration plan</u> for the measuring and test equipment that are used in production, inspections for receiving goods, in-process & final inspection and test operations? (工厂是否有测量/测试设备清单和校正计划,包括生产使用/来料检验/过程检验/产品终检以及测试阶段的测量测试设备)	3		X					The factory has a master list and calibration plan for the producing machines that are used in production. No test equipment available in factory and no master list established yet.	9.00	
7.3	Does factory arrange <u>calibrations</u> for all measuring and test equipment at appropriate intervals to ensure the equipment are suitable and accurate to measure and verify products' acceptance, and the calibrations are traceable to national / international standards? (工厂是否在恰当时间间隔安排测量/测试设备的校正,以保证设备恰当和精确地验证产品,且相关校正追溯国家/国际标准)	5				X			During the document review it was noted that factory does not arrange calibrations for all measuring and test equipment at appropriate intervals to ensure the equipment. Only one calibration certificate was provided on the audit day regarding the Measuring ruler.	5.00	
7.4	Does factory <u>record, identify calibrations</u> , define and implement a procedure to <u>recall</u> products when equipment is found not in calibration status? (工厂是否记录、识别校正结果,并有定义召回流程,以在发现测量/测试设备失准时对其检验过的产品执行召回。)	3		X					During the document review it was noted that factory defines a procedure to recall products when equipment is found not in calibration status.	9.00	
Section Summary Line: Available Score: 60.00 Total Compliance Percentage: 45.00%										27.00	0

Section 8: CAP, Crisis Mgt, and Continuous Improvement (第八部分:改正措施计划和持续改善)											
8.1	Does factory have a <u>CAP process</u> , that should define conditions to initiate CAP, and CAP work flow that should include containment, causes investigation, corrective actions to eliminate causes and prevent recurrence, and follow up / verify effectiveness? (工厂是否有纠正和预防措施流程,应该包括什么情况发行CAP,CAP流程应该包括围堵措施,原因调查,消除原因的纠正措施和预防措施,以及跟进/确认有效性)	3	X						Factory has a CAP process, that defines conditions to initiate CAP, and CAP work flow that should include containment, causes investigation, corrective actions to eliminate causes and prevent recurrence, and follow up / verify effectiveness. Internal audit was checked.	12.00	
8.2	Does factory have a method to review and respond to <u>customer complaints / returns / claims</u> that includes customer's inspection / testing fails, and, the factory investigates causes, takes necessary corrective actions to prevent recurrence? (工厂是否有流程回复客户抱怨/退货/投诉(包括客户检验和测试不良,工厂是否调查原因,执行必要的纠正预防措施防止再次发生)	4			X				During the document review it was noted that factory has a method to review and respond to customer complaints. But the factory does not investigate causes in order to prevent recurrence.	8.00	
8.3	Does factory request for and follow up necessary corrective actions when there are <u>significant quality issues</u> (which causes potential safety hazard, regulation violation, loss of product function, etc.) happened in factory's productions or with products from its suppliers, etc.? (当成品,在制品或原材料有重大质量问题(导致潜在的安全风险,违反法规,产品功能失效等)时,工厂是否执行或要求必要的纠正预防措施)	4	X						Factory requests for and follows up necessary corrective actions when there are significant quality issues (which causes potential safety hazard, regulation violation, loss of product function, etc.) happened in factory's productions or with products from its suppliers (Internal audit and corrective action were checked).	16.00	
8.4	Does factory collect <u>quality data and analyze data</u> with certain quality analysis tools, so as to precisely identify quality problems and improvement opportunities? Does factory <u>initiate corrective actions and/or quality improvement projects</u> based on quality data analysis? (工厂是否有一些必要的质量数据收集和分析,以准确的识别质量问题和改善机会?工厂是否基于质量数据分析而启动一些纠正预防措施或质量改善项目)	3					X		During the document review it was noted that factory does not collect quality data and analyze data with certain quality analysis tools, so as to precisely identify quality problems and improvement opportunities.	0.00	

8.5	Does the factory conduct internal audits for its quality management according to internal procedures? Are the audit results captured and CAPA (Corrective Action and Preventive Action) properly executed and documented? (工厂是否对内部质量管理进行内审, 并记录内审发现的问题, 执行纠正预防措施并记录?)	4		X					Factory conducts internal audits for its quality management according to internal procedures and audit results captured and CAPA (Corrective Action and Preventive Action) properly executed and documented. Last internal audit was checked, NC raised with simple CAP closed.	12.00	
8.6	Does the factory have a process in place to manage various crisis situations , such as breakdown of production equipment or lines, fire and evacuation of the facility, major supplier bankruptcy, strike? (工厂是否有方法有效管理各种危机, 比如, 生产设备, 生产线故障, 火灾及工厂疏散, 主要供应商破产, 罢工, 等等?)	3	X						Factory has a process in place to manage various crisis situations, such as breakdown of production equipment or lines, fire and evacuation of the facility, major supplier bankruptcy, strike. Drill record was done by factory.	12.00	
8.7	Does the factory have a documented procedure in place to handle product recalls ? (工厂是否有处理产品召回的流程)	3	X						Factory has a documented procedure in place to handle product recalls. Drill record was done by factory.	12.00	
Section Summary Line:		Available Score:	96.00	Total Compliance Percentage:		75.00%				72.00	0

Factory: LANDIS TEXTILES

Audit Requester

xcfang@amazon.com

Audit Team's comments for the factory's capabilities and quality assurance:

Strength: The facility ensures adequate machinery, which are mainly: Steel detectors machine, cutting table machine, flat cutting machine, pillowcase cutting machine, pillowcase sewing machine, sewing machine, surgical machine, pillowcase reversing machine, flat sheet machine, fitted sheet machine and pillow case machine, etc.. -All interviewed workers were comfortable during interviews and have confirmed the good working conditions and knowledge. -The management staffs were open and cooperative during the audit. -Factory has right knowledge, experiences and competent engineers / technicians to develop the type of products being sourced	Weakness: Factory doesn't clearly communicate quality requirement to its suppliers when purchase materials. Factory does not conduct FAI. Factory does not collect and analyze quality data. Test equipment not available yet.

Amazon FQA Corrective Action Plan (CAP)

Important: The Major CAPs should be closed before:

Factory: LANDIS TEXTILES

Vendor: JS Royal (Jiangyin Hongliu Bedsheet Co.,Ltd)

CAP Issue Date: _____

CAP Follow Up By: _____

FC, QMS or Product Spec.	Clause# in Checklist	Audit Findings / Nonconformities / Discrepancies	Causes (if any)	Corrective Actions	Estimate Completion Date	Attached files/pictures if there are	Amazon SQM Follow Up Results
QMS	1.2	The factory has the right facilities (incl. production equipment, tooling) for manufacturing of the products. The maintenances / status of the facilities are good. LANDIS TEXTILES production process starts with reception of fabric and accessories, scan the code for warehousing, fabric scan code out of warehouse, fitted order planning, flat sheet order planning, pillowcase order planning, cutting, flat sheet machine, rolling of pillow case machine, sewing, folding, packaging (Cardboard and PVC). Test equipment is not available at factory yet, and factory did not do any test for finished product.					
QMS	4.4	During the document review it was noted that the factory doesn't clearly communicate quality requirement to its suppliers when purchase materials.					
QMS	5.1	During the document review it was noted that there is a production plan in place for customers' orders, by considering purchasing and production lead time, workforces, available capacity, etc., and have means to manage productions in peak seasons. Factory's on-time delivery rate is not calculated.					
QMS	5.5	During the document review and on-site check it was noted that the factory's Production / QC doesn't inspect and sign off the first articles of WIPs and finished products at appropriate process steps to ensure that they meet the requirements with regard to specification, quality & safety. Related procedures or requirement for FAI is in place.					
QMS	5.14	During the document review it was noted that factory defines in-process inspections, including inspection needs at various stages, sampling plan, inspection and testing methods, equipment to use, quality requirements and acceptance criteria. But does not define the frequency of in-process inspections.					
QMS	6.3	Factory conducts final inspections according to the defined process, against relevant drawings / specifications, product requirements, reference samples, but tests on finished products are not conducted internally at factory yet as test equipment is not available yet. Products are sent to 3rd party lab for testing. Records available.					
QMS	7.1	During the document review it was noted that factory has no test of all equipment available. Only one calibration certificate was provided on the audit day regarding the Measuring ruler. Test equipment such as light box, colorfastness tester, crocking tester, etc. are moved from China and under customs clearance at present.					
QMS	7.3	During the document review it was noted that factory does not arrange calibrations for all measuring and test equipment at appropriate intervals to ensure the equipment. Only one calibration certificate was provided on the audit day regarding the Measuring ruler.					
QMS	8.2	During the document review it was noted that factory has a method to review and respond to customer complaints. But the factory does not investigate causes in order to prevent recurrence.					
QMS	8.4	During the document review it was noted that factory does not collect quality data and analyze data with certain quality analysis tools, so as to precisely identify quality problems and improvement opportunities.
